DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 25, 26, 28 and 30 are rejected under 35 U.S.C. 102(a) as being anticipated by Excel 2000 Advanced.

A fluctuation predicting device and method

means of:

(a) holding/preserving theoretical models of correlation function of fluctuations for a plurality of state of the time-sequence data respectively; (See page, 200)

(b) acquiring sampling data by sampling local portion of real time-sequence data (See page 201, Box, Input Range);

(c) generating real correlation function based on the sampling data (See, page 203, descriptive statistics);

(d) selecting one of the theoretical models of step (a) best matching to the real correlation function generated in the step (c), and judging one of the states regarding the real time-sequence data. (See. Page 208, The examiner takes official notice that it

is routine to one skilled in the art at the time to select a theoretical model based on P-values and the like.)

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 25-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Excel 2000 Advanced in view of Takayasu et al., Dynamic Numerical Models.

The primary reference discussed in the 102 type rejection fails to teach the elements directed to the preferred method of claims 27 and 29. The secondary reference (see, equation 3) reads on the elements of these two claims. It would have been obvious for one skilled in the art at the time to have combined the teaching and code the method of the secondary reference into the Excel/VBA of the primary reference as motivated by the need to automate and test the expression Dynamic Numerical Model.
